

Stock Trading & Execution

Invest in a listed company of your choice

Take advantage of our low commission rates and exceptional service to buy and sell shares of publicly traded companies in both domestic and international (subject to Central Bank Approval) markets. A company share represents a single unit of ownership in a corporation or an organization. Some of the benefits of stocks are capital gains over time and the potential income from dividends. Stocks are also subject to risks such as a dramatic fall in price, even to zero, the inability to sell your shares or liquidation of a company as defined by economic, market value and liquidity risks. It is important to understand the organization that you wish to own, so be sure to do your research using company annual reports or by speaking with someone knowledgeable about the market.
